

# An online shop Efe owns, and the tools to run it.

A complete sales channel with its own back office, plus an AI layer that answers customers on WhatsApp, drafts your marketing, and tells you what is selling.

## TOTAL BUILD

# GH¢48,000

Against roughly GH¢870,000 at agency rates, and against more than GH¢500,000 a year to build the same thing with an in-house team. Paid in three stages, as each part starts working.

# Where Efe stands today

Every Efe order currently reaches a customer through somebody else. That arrangement sells product, and it costs three things that do not appear on an invoice:

| WHAT IS LOST | WHY IT MATTERS                                                                                                                                     |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| The margin   | The retail markup on every order stays with the reseller rather than with Efe.                                                                     |
| The customer | Efe does not know who bought, what they bought, or how to reach them again. There is no list to market to and nothing to build repeat business on. |
| Control      | Efe cannot run a promotion, change a price, launch a product or test an offer without asking someone else to do it.                                |

# What this delivers

| COMPONENT      | WHAT IT DOES                                                                                                                                    |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| Online shop    | The full storefront: catalogue, sizes, basket, checkout, mobile money and card. Efe's own channel, on Efe's own domain.                         |
| Back office    | Orders, stock with a full movement history, prices, promotions, customers, first-party analytics, and a record of every change and who made it. |
| History import | Years of orders, customers and prices moved out of the current system in an afternoon, so nothing starts from zero.                             |
| WhatsApp agent | Answers customer questions, checks stock, quotes delivery and takes orders on the channel where Ghanaian beauty sales actually close.           |
| Content agents | Drafts social posts, captions and product copy from your real ingredient lists. Nothing publishes without your approval.                        |
| Insight agent  | Ask the shop a question in plain English. What is selling, what to restock, which customers have stopped buying.                                |

**Everything the AI says comes from Efe's own data.** Product facts come from your ingredient lists and price list, stock answers come from the live system, and nothing is published without a person approving it. That is the difference between a useful assistant and one that invents a claim about a cosmetic.

# What this costs, and what it costs elsewhere

| COMPONENT                        | AGENCY RATE                   | YOUR PRICE |
|----------------------------------|-------------------------------|------------|
| Custom shop and back office      | <del>464,000 to 928,000</del> | 22,000     |
| WhatsApp sales and support agent | <del>174,000 to 464,000</del> | 12,000     |
| Social content agents            | <del>116,000 to 290,000</del> | 8,000      |
| Business insight agent           | <del>116,000 to 232,000</del> | 6,000      |
| Total build                      | 870,000+                      | 48,000     |

Agency rates are converted from published 2026 pricing in the United States and Europe. They are a fair measure of the work involved, not a claim about what anyone in Accra charges.

The closer comparison is what it would take to build this in-house. A senior developer in Accra costs **GH¢15,000 to GH¢20,800 a month**. Add a designer and somebody who can put an AI agent into production and you are looking at a small team at roughly **GH¢45,000 a month**, over half a million cedis a year, and you would still be recruiting six months from now.

## Paid in three stages, as each part starts working

Nothing is paid for before it exists. Each stage begins only once the one before it is earning its keep, and the AI stages deliberately follow the history import, because an agent with no sales data behind it is a demonstration rather than a tool.

|                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <div>STAGE ONE, NOW</div> <div>Shop and back office</div> <div>GH¢22,000</div> <div><ul style="list-style-type: none"><li>Storefront, checkout, admin</li><li>History imported</li><li>Paid 40 / 30 / 30 on milestones</li></ul></div> | <div>STAGE TWO, MONTH THREE</div> <div>WhatsApp agent</div> <div>GH¢12,000</div> <div><ul style="list-style-type: none"><li>Questions, stock, delivery</li><li>Order taking and handover</li><li>Starts once real orders exist</li></ul></div> | <div>STAGE THREE, MONTH SIX</div> <div>Content and insight</div> <div>GH¢14,000</div> <div><ul style="list-style-type: none"><li>Social and product copy</li><li>Ask the business a question</li><li>Can move to year two</li></ul></div> |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# What year one comes to

| LINE                   | MONTHLY | YEAR ONE |
|------------------------|---------|----------|
| Stages one and two     | -       | 34,000   |
| Care plan and hosting  | 1,500   | 18,000   |
| Running costs, at cost | ~900    | ~10,800  |
| Total                  | -       | ~62,800  |

**Roughly three orders a day covers the first year.** At an average order of GH¢120 and a 40% margin on a direct sale, about 92 orders a month pays for everything above. Everything past that is margin Efe currently gives away.

## What it costs to run

This usually surprises people, so it is worth stating plainly: the AI is not the expensive part. Models are billed by how much text they process, the shop is not large, and replying to a customer who messaged you first is free on WhatsApp for 24 hours.

| SERVICE              | WHAT IT IS FOR                                                                                                                                                 | PER MONTH     |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| AI models            | One account with access to hundreds of models, so routine replies use an inexpensive one and only the work that needs a stronger model gets it. Billed by use. | 30 to 420     |
| WhatsApp Business    | Replies inside a customer's 24-hour window are free. Only broadcasts and reminders are charged, per message.                                                   | 0 to 350      |
| Hosting              | The site itself, worldwide, scaling automatically with traffic.                                                                                                | 230           |
| Database and backups | Orders, customers, stock and documents.                                                                                                                        | 0 to 290      |
| Domain               | Annual renewal, spread across the year.                                                                                                                        | 15            |
| Total                | Passed through at cost, never marked up                                                                                                                        | ~275 to 1,305 |

For comparison, the storefront subscription Efe pays today is about GHC520 a month for a shop and nothing else. The figure above covers the shop, the back office, the database and every AI agent, and at the low end it costs less.

## What the monthly care plan covers

| INCLUDED                         | ESSENTIAL<br>1,500 | STANDARD<br>3,000 | GROWTH<br>6,000 |
|----------------------------------|--------------------|-------------------|-----------------|
| Hosting, domain, certificates    | Yes                | Yes               | Yes             |
| Daily backups, uptime monitoring | Yes                | Yes               | Yes             |
| Security updates                 | Yes                | Yes               | Yes             |
| Fixing faults                    | Yes                | Yes               | Yes             |
| Price, stock and text changes    | 10 / mo            | Unlimited         | Unlimited       |
| Improvement hours                | None               | 4 / mo            | 10 / mo         |
| Response time                    | 2 days             | 1 day             | Same day        |
| Performance review               | Annual             | Quarterly         | Monthly         |

Recommended starting tier: **Essential**. Moving up is a one-line change whenever it is needed.

Not included at any tier: new features, new page designs, campaign builds, third-party integrations, copywriting, photography, and paid advertising. Each is quoted separately.

# Terms

| ITEM          | TERMS                                                                                                                                                                                       |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pricing basis | This price is offered as a partnership rate. It holds on two conditions: a 24-month care plan commitment, and first refusal on digital work across affiliated companies during that period. |
| Payment       | Each stage billed 40% on start, 30% at handover, 30% on completion. Care plan billed monthly in advance.                                                                                    |
| VAT           | All figures exclusive of VAT and applicable levies, charged where required.                                                                                                                 |
| Running costs | Billed monthly at cost with no markup, against the actual invoices. A monthly ceiling is agreed in advance, with notice before it is reached.                                               |
| Ownership     | Efe holds a full licence to the platform for as long as the care plan is active. Outright ownership is available at a stated buyout figure.                                                 |
| Your data     | Efe owns all of its data at all times, and can export orders, customers and the catalogue at any point, in a standard format.                                                               |
| Validity      | This proposal holds for 30 days from the date on the cover.                                                                                                                                 |

## What happens next

1. Confirm the stage one scope and sign.
2. Export orders, customers and the price list from the current system. A CSV is fine.
3. Stage one goes live, with the history already loaded.
4. Review after one month of real orders, then decide on stage two.

Two things are needed before checkout can accept payment: the confirmed retail price list, and Paystack account details for mobile money and card. Neither blocks the build.

Prepared 3 August 2026. Comparative market figures are drawn from published 2026 agency pricing and salary data, converted at GH¢11.6 to the US dollar. Running cost estimates assume current trading volumes and will be reconciled against actual invoices each month. Break-even figures assume an average order of GH¢120 and a 40% margin on direct sales; both should be confirmed against Efe's own numbers.
